

# JavaScript Cheat Sheet

## Types of variables

<b>var i = 123;</b>	<i>integer</i>
<b>var f=0.2</b>	<i>real number</i>
<b>var t="texte"</b>	<i>string</i>
<b>var a=[1, "deux", 'trois']</b>	<i>array</i>
<b>var m={1:"un", "deux":2}</b>	<i>map, associative array</i>
<b>function x() {}</b>	<i>object</i>

## Event handlers

<b>onAbort</b>	<i>loading stopped</i>
<b>onBlur</b>	<i>focus lost</i>
<b>onChange</b>	<i>content modified</i>
<b>onClick</b>	<i>clicked</i>
<b>onDbClick</b>	<i>clicked twice</i>
<b>onDragDrop</b>	<i>moved</i>
<b>onError</b>	<i>not loaded</i>
<b>onFocus</b>	<i>focus entered</i>
<b>onKeyDown</b>	<i>key depressed</i>
<b>onKeyPress</b>	<i>key pressed</i>
<b>onKeyUp</b>	<i>key released</i>
<b>onLoad</b>	<i>just after loading</i>
<b>onMouseDown</b>	<i>mouse button depressed</i>
<b>onMouseMove</b>	<i>mouse moved</i>
<b>onMouseOut</b>	<i>mouse exited</i>
<b>onMouseOver</b>	<i>mouse on the element</i>
<b>onMouseUp</b>	<i>mouse button released</i>
<b>onReset</b>	<i>reset form button clicked</i>
<b>onResize</b>	<i>size of page changed</i>
<b>onSelect</b>	<i>element selected</i>
<b>onSubmit</b>	<i>submit form button clicked</i>
<b>onUnload</b>	<i>page exited</i>

## Methodes of object (inherited by all objects)

<b>toString()</b>	<i>convert to a string</i>
<b>toLocaleString()</b>	<i>convert to a localized string</i>
<b>valueOf()</b>	<i>get the value</i>

## Date methods

<b>new Date()</b>	<i>constructor, arguments: milliseconds, string, list</i>
<b>getDate()</b>	<i>day of the month</i>
<b>getDay()</b>	<i>day of the week</i>
<b>getTime()</b>	<i>number of milliseconds since 1/1/1970</i>
<b>getFullYear()</b>	<i>and getMonth/Hour/Minutes/Seconds</i>

## String methods

<b>charAt()</b>	<i>character at the given position</i>
<b>charCodeAt()</b>	<i>code of a character</i>
<b>concat()</b>	<i>concatenate with the argument</i>
<b>indexOf()</b>	<i>position of a character</i>
<b>lastIndexOf()</b>	<i>position from the end</i>
<b>localeCompare()</b>	<i>localized comparison</i>
<b>match()</b>	<i>apply a regular expression</i>
<b>replace()</b>	<i>replace a substring</i>
<b>search()</b>	<i>search a substring</i>
<b>slice()</b>	<i>extract a part</i>
<b>split()</b>	<i>cut to build an array with parts</i>
<b>substring()</b>	<i>extract a part</i>
<b>toLowerCase()</b>	<i>convert to lowercase</i>
<b>toUpperCase()</b>	<i>convert to uppercase</i>
<b>toLocaleLowerCase()</b>	<i>localized lowercase</i>
<b>toLocaleUpperCase()</b>	<i>localized uppercase</i>

### Array, index and methods

<b>a["one"]=1</b>	<i>assignment by indice</i>
<b>a.one=1</b>	<i>assignment by attribute</i>
<b>delete a["one"]</b>	<i>deletion by indice</i>
<b>delete a.one</b>	<i>deletion by attribute</i>
<b>for(var k in a) {}</b>	<i>iteration on the content</i>
<b>concat()</b>	<i>add a second array</i>
<b>join()</b>	<i>concatenate the elements into a string</i>
<b>push()</b>	<i>add an element</i>
<b>pop()</b>	<i>get and remove the last element</i>
<b>reverse()</b>	<i>invert the order of elements</i>
<b>shift()</b>	<i>insert an element at start</i>
<b>slice()</b>	<i>extract a sub-array</i>
<b>splice()</b>	<i>insert an array</i>
<b>sort()</b>	<i>sort the elements</i>
<b>toString()</b>	<i>return the array as a string</i>
<b>unshift()</b>	<i>get and remove the first element</i>

### Number methods

<b>new Number()</b>	<i>constructor with a decimal/hexa/string argument</i>
<b>toString()</b>	<i>convert to a string</i>
<b>toExponential()</b>	<i>exponential form</i>
<b>toPrecision()</b>	<i>convert to a given number of decimals</i>

### Function (is also an object)

<b>function x(a, b) { return y; }</b>	<i>declaration</i>
<b>y = x(1, "two")</b>	<i>call</i>
<b>var y = new x(1, "two")</b>	<i>declaring a instance</i>
<b>x.prototype.methodx = function() { }</b>	<i>adding a method</i>

### Built-in functions

<b>eval()</b>	<i>evaluate an expression</i>
<b>parseInt()</b>	<i>convert a string to an integer</i>
<b>parseFloat()</b>	<i>convert a string to a floating number</i>
<b>isNaN()</b>	<i>check if the content of a variable is valid</i>
<b>isFinite()</b>	<i>check for overflow</i>
<b>decodeURI()</b>	<i>convert to a string</i>

<b>decodeURIComponent()</b>	<i>decode a component of the URL</i>
<b>encodeURI()</b>	<i>convert to file name</i>
<b>encodeURIComponent()</b>	<i>encode a component to URL</i>
<b>escape()</b>	<i>convert to URL parameters</i>
<b>unescape()</b>	<i>convert parameters to normal string</i>

### Regular expressions, suffixes

<b>g</b>	<i>global</i>
<b>i</b>	<i>case-insensitive</i>
<b>s</b>	<i>single line</i>
<b>m</b>	<i>multi-lines</i>

### Regular expressions, masks

<b>^</b>	<i>start of string</i>
<b>\$</b>	<i>end of string</i>
<b>(...)</b>	<i>grouping</i>
<b>!()</b>	<i>but this group</i>
<b>.</b>	<i>any character</i>
<b>(x y)</b>	<i>either x or y</i>
<b>[xyz]</b>	<i>among x y or z</i>
<b>[^xyz]</b>	<i>any but x y or z</i>
<b>a?</b>	<i>may holds a once</i>
<b>a+</b>	<i>at least a once</i>
<b>a*</b>	<i>zero or several times a</i>
<b>a{5}</b>	<i>five times a</i>
<b>a{5,}</b>	<i>at least five times a</i>
<b>a{1, 4}</b>	<i>a between 1 and 4 times</i>
